## Network Services

**LATEST SUBMISSION GRADE**

**87.5%**

1.Question 1

Question

**1 / 1 point**

**Correct**

Great, you got all the right answers.

2.Question 2

Question

**1 / 1 point**

**Correct**

Right on! A proxy server can be used to regulate access to certain websites.

3.Question 3

Question

**1 / 1 point**

**Correct**

You nailed it! Directory services, like ActiveDirectory and OpenLDAP, help manage users and computers in a company.

4.Question 4

Question

**0 / 1 point**

**Incorrect**

You didn't select all the correct answers

5.Question 5

Question

**1 / 1 point**

**Correct**

Woohoo! The local hosts files are always checked first.

6.Question 6

Question

**1 / 1 point**

**Correct**

Right on! We can rule out if DNS is an issue by verifying that the hostname points to a nameserver. If we copy the IP address of the results and paste it into the web browser, it should resolve the website name if the DNS is working.

7.Question 7

Question

**1 / 1 point**

**Correct**

Right on! PXE Boot stands for Pre Boot Execution. This allows you to boot into software that's available over the network.

8.Question 8

Question

**1 / 1 point**

**Correct**

Well done! TFTP stands for trivial FTP. It's a simpler way to transfer files than using FTP and is often used to host installation files.
