## What is System Administration?

**TOTAL POINTS 8**

1.Question 1

Which of the following can be a responsibility of a systems administrator?

**1 / 1 point**

Setting up new user accounts and machines

Maintaining servers

Troubleshooting user issues

All of the above

**Correct**

Great job! A systems administrator has a wide range of responsibilities; this can include, but is not limited to, setting up new user accounts and machines; maintaining servers; and troubleshooting user issues.

2.Question 2

Which of the following make up IT infrastructure?

**1 / 1 point**

Hardware and software

Network

Operating systems

All of the above

**Correct**

You got it! IT infrastructure encompasses the software, hardware, network, operating systems, and other services required for an organization to operate in an enterprise IT environment.

3.Question 3

Which of these is considered a server? Check all that apply.

**1 / 1 point**

Software that's only available to the computer it's installed on

A software that provides a service to other software

**Correct**

Awesome! Servers are essentially software or computers that provide a service to other software or computers.

Software that provides a service to other machines

**Correct**

Awesome! Servers are essentially software or computers that provide a service to other software or computers.

A computer that provides a service to other computers

**Correct**

Awesome! Servers are essentially software or computers that provide a service to other software or computers.

4.Question 4

A KVM switch is used to:

1 / 1 point

switch between multiple computers using one monitor, keyboard, and mouse

mount multiple servers into one server rack.

enable you to receive incoming SSH connections.

allow you to serve web content to many clients.

**Correct**

Excellent job! A KVM switch is a device used to switch between multiple computers using one keyboard and video display, like a monitor and mouse. That's where the name "KVM" comes from!

5.Question 5

Which of these server hardware can you stack on top of each other in a server rack?

1 / 1 point

Rack

**Correct**

Great work! A rack and a blade server lay flat and can be stacked on top of each other when you mount them on a server rack.

Tower

Desktop

Blade

**Correct**

Great work! A rack and a blade server lay flat and can be stacked on top of each other when you mount them on a server rack.

6.Question 6

With \_\_\_\_\_, you can access your data, use applications, and more from anywhere in the world, as long as you have an Internet connection.

1 / 1 point

☐

cloud computing

☐

a PAN

☐

a LAN

**Correct**

That's exactly right! The cloud is a network of servers that store and process our data. We refer to the concept of cloud computing as a way to do our daily computer job functions from anywhere, as long as we have an Internet connection.

7.Question 7

What are the **benefits** of cloud computing over local computing? Check all that apply.

0.75 / 1 point

☐

Software updates are handled by the company providing the service.

**Correct**

Correct! Cloud computing has some great benefits, like smaller starting costs, services that are accessible anywhere in the world with an Internet connection, and software updates that are handled by another company.

☐

Services are accessible from anywhere in the world.

**Correct**

Correct! Cloud computing has some great benefits, like smaller starting costs, services that are accessible anywhere in the world with an Internet connection, and software updates that are handled by another company.

☐

There are potential long-term costs associated with cloud computing.

There are smaller starting costs for cloud computing.

You didn't select all the correct answers

#### 8.Question 8

What are the **benefits** of local computing over cloud computing? Check all that apply.

1 / 1 point

Services are handled by another organization, so that makes your organization dependent on a third party.

You have complete control of the IT infrastructure.

#### Correct

You nailed it! With local computing, you're in complete control of your IT infrastructure and can update and secure your organization at anytime.

Updates can be handled at anytime.

#### Correct

You nailed it! With local computing, you're in complete control of your IT infrastructure and can update and secure your organization at anytime.

There are potential long-term costs associated with local computing.
